

PRESS RELEASE

Education Partners Inc. Announces...

Move toward greater Productivity

Education Partners announces Word ER, a set of customizations to the Word 2010 and Outlook 2010 environments that help users work more efficiently within the new ribbon-based user interface.

Keep it Simple. Make it easy to use and maintain. Eliminate annual maintenance costs. Education Partners listened to clients and learned that a one-time license and eliminating on-going annual costs around software is a key goal for Firm Management with limited budgets.

With the introduction of Word ER, law firm clients can implement a straight-forward, easy-to-use document production environment. At the same time the Firm becomes self-sufficient in maintaining the new environment, once the consulting and knowledge transfer process concludes.

Current document production processes are reviewed and evaluated. Practice-group requirements are identified and satisfied. Time-savers and automation is introduced to make the most positive impact on productivity with Office 2010. Word ER relies on a simple design strategy to optimize the features in native Word, while presenting lawyers and staff with customized templates and tools to streamline document production and make frequently used content quickly available. A firm-specific "Tab" on the Word ribbon enhances the new ribbon interface and saves time. The enhanced Outlook ribbon makes templates and contacts readily available for quick correspondence.

Education Partners welcomes conversations and demonstrations to begin an open dialog about moving law firms and law departments toward a Microsoft Office Desktop Refresh with Word ER.
